

A-PASS®

AUTOMATED PERSONNEL ASSISTED SECURITY SCREENING

A-PASS® is a high speed, interactive photo identification and access control system designed specifically for the cruise line industry. The system provides tracking, screening and identification of ship's personnel, passengers and visitors.

A-PASS® embeds a full color digital photograph, together with personal database information and merges time and date tracking information, upon boarding and de-boarding. The system digitizes and re-displays a full color photo image for verification instantaneously. **A-PASS®** offers a variety of reports and tracking information that meet all maritime regulatory reporting (SOLAS, Souls on Board, Immigration Manifest) standards.

A-PASS® UNIQUE FEATURES

- ⦿ All information is displayed in real-time, providing accurate, up-to-date information with the click of a mouse.
- ⦿ Equipment is ADA Compliant (allowing a photograph to be taken of physically challenged people).
- ⦿ Portable kiosk terminals can be located throughout the vessel to monitor boarding/de-boarding status and query the system on individual or group activities.
- ⦿ Operators can print out locally, or electronically send, a color photograph, database and tracking information via satellite or e-mail practically anywhere.
- ⦿ Operator interface is menu driven and user friendly.
- ⦿ Gangway station kiosks are specially designed to be portable to minimize hook-up, set-up and training.
- ⦿ Instantly captures passenger or visitor photograph upon insertion of boarding pass.

- ⦿ Boarding card can be inserted in any direction.
- ⦿ Large photo is displayed with name, time and date.
- ⦿ Color-coded monitoring screens and audible alerts differentiate conditions from normal boarding conditions.
- ⦿ Alert and personal message notification can be played as soon as a person's boarding card is inserted.
- ⦿ Operators can instantly query the database for a quick lookup for photo verification and boarding status, time, date and cabin number.
- ⦿ Lost cards are immediately de-activated and an audible notification is given when and if the card is used.
- ⦿ Operators can authorize manual entry with photo verification.
